Backer HTS Establishes Information Security Policy: Safeguarding Customer Trust Through Full Participation and Continuous Improvement

Backer Heating Technologies (Shenzhen) Co., Ltd. ("Backer HTS") has recently officially released its Information Security Management Policy, setting out the core principles of "Full *participation, risk control; proactive prevention, continuous improvement.*" *This marks a* substantive step forward in the development of the company's information security management system, aimed at safeguarding customer information and business data through standardized management mechanisms.

The establishment of this policy reflects Backer HTS's dual commitment to information security. On the one hand, through full participation, security responsibilities are assigned to every position and process step, so that information security risks are identified and controlled at the source. On the other hand, guided by proactive prevention, the company has established a closed-loop management process of continuous improvement, ensuring that its security management capabilities keep pace with business development and evolving threats. The company is systematically building an information security management system in accordance with the requirements of ISO/IEC 27001:2022, covering key areas such as risk assessment, implementation of controls, performance monitoring, and continuous optimization.

For customers, the release of the Information Security Management Policy means that *Backer HTS now has a clear governance baseline for information security in its business* relationships. Guided by this policy, the company will strictly implement information protection requirements in business collaboration, standardize data processing procedures, and provide customers with clear channels for security-related communication. Interested parties who wish to learn more about the company's information security management may contact: Tony Jin, Marketing Department, 0755-8975 0106, tony.jin@backerhts.com.

The information security management system of Backer HTS is currently under construction as planned. The company will continue to advance the refinement of system documentation, company-wide training, and internal audits to ensure that security management measures are effectively implemented. Once the system has been fully established and its operation sufficiently verified, the company will initiate a third-party certification assessment in due course to independently validate the maturity of its security management capabilities.

Backer Heating Technologies (Shenzhen) Co., Ltd., a subsidiary of the Backer Group, draws on more than 70 years of heating technology expertise to provide customers with reliable heating solutions. The company has always regarded information security as the cornerstone of customer service and is committed to earning long-term trust through reliable management practices.
